

## FEATURES

- Strong rotationally moulded construction
- Smooth surface
- Guaranteed to last
- Durable and light weight
- Easy to clean and maintain
- Holds up to 170/850 gallons of water
- U.V resistant for outdoor application
- 2" drain plug which allows water to be easily drained
- Anti-corrosive material
- Stackable
- Easy for shipment and transportation

Aquaculture Tanks are used extensively for breeding and raising: fish, shrimp, crab and other marine animals. The FDA compliant polyethylene is safe and non-toxic to aquatic life.

The Aquaculture Tank design eliminates shadows which scare fish and therefore minimizes stress to the fish, causing them to be more productive, healthy and active.

Because of its superior engineering design properties, they are durable, crack resistant and guaranteed to last in tough environments.

Stackable for easy transport

2" bulkhead
